

# ENERGY POLICY

**SNM TRAINING  
COLLEGE  
MOOTHAKUNNAM**

**The Energy Policy of SNM Training College embodies its commitment to energy conservation and environmental stewardship. This policy outlines the institution's proactive efforts to conserve energy and reduce its carbon emissions, with the overarching goal of maintaining a sustainable and eco-friendly campus environment.**

- The institution strongly recommends use of energy saving LED electrical bulbs throughout its campus to minimise electricity consumption
- The entire college community is instructed to keep windows and doors on both sides of classrooms and halls open in order to harness the natural resources of sunlight and fresh air
- The institution shall use light-colored wall paint to minimise the need for artificial lighting during daylight hours

- **A committee can be assigned, the duty of ensuring the proper maintenance and service of electrical equipments of the college .**
- **Routine maintenance procedures shall be systematically applied to UPS systems, printers, and photocopiers to prevent unnecessary energy waste.**
- **The institution promotes the use of a diesel generator as a contingency measure to address the college's energy needs during power failures.**

- The institution actively promotes the adoption of alternative energy sources like solar energy and biogas
- The institution regularly distributes informational circulars to ensure that all stakeholders are well-informed about our energy conservation objectives and their respective responsibilities.
- The institution prioritises education and awareness programmes aimed at instructing students, teachers, and all campus occupants about the importance of switching off lights and fans when not in use.

- The institution actively encourages the adoption of shared transportation systems, bicycles, and electric vehicles among the campus community.

**SNM Training College's Energy Policy reflects a robust commitment to sustainable practices, encompassing measures such as the promotion of energy-efficient technologies, harnessing natural resources, and embracing alternative energy sources. The institution not only emphasizes the responsible use of energy through routine maintenance and awareness programs but also advocates for a holistic approach by encouraging shared transportation and eco-friendly commuting options. By fostering a culture of environmental stewardship, the college positions itself as a responsible institution dedicated to minimizing its carbon footprint and ensuring a greener, more sustainable future.**
