

WASTE MANAGEMENT

POLICY

**SNM TRAINING
COLLEGE
MOOTHAKUNNAM**

INTRODUCTION

The waste management policy for an educational institution serves as a guiding document that outlines the institution's commitment to responsible waste management, sustainability, and environmental stewardship. It sets the direction for waste reduction, recycling, and disposal practices, and it helps create a culture of environmental responsibility on campus.

Objectives

- Our institution is committed to minimise waste generation at all sources through proactive measures and practices.
- Our institution is dedicated to ensure efficient waste segregation and proper disposal practices to minimize environmental impacts.
- We have implemented a three-bin system on all floors of the main building to facilitate effective waste segregation.
- All stakeholders within our institution are obligated to ethically reduce their individual waste generation as part of our waste management policy.
- Our policy provides clear and defined roles and responsibilities for each aspect of waste management, ensuring efficient coordination and execution.
- We actively promote awareness and encourage the reuse and recycling of waste materials among our campus community.
- We have established protocols for the safe and secure disposal of electronic waste (e-waste) in accordance with regulations.

Goals & Objective

As part of our waste management policy, we encourage initiatives to transform waste into valuable, sustainable products, contributing to a circular economy.
